MySQL Database Management

Christian Wenz
Consultant, Software Architect

@chwenz

Reading Data

file.php

```
$result = mysqli_query(
    $db,
    'SELECT * FROM table');

foreach ($result as $row) {
    $value1 = $row['col1'];
    $value2 = $row['col2'];
}
```

Updating Data

```
$sql = sprintf(
    "UPDATE table SET col1='%s', col2='%s'
     WHERE col3='%s'",
     mysqli_real_escape_string($db, 'value1'),
     mysqli_real_escape_string($db, 'value2'),
     mysqli_real_escape_string($db, 'value3'));

mysqli_query($db, $sql);
```

Deleting Data

file.php

```
$sql = sprintf(
    "DELETE FROM table WHERE col1='%s'",
    mysqli_real_escape_string(
        $db, 'value1'));

mysqli_query($db, $sql);
```

What's Missing?

User authentication/authorization

Least privilege database users

Cross-site request forgery (CSRF) protection
