More PHP Features

Christian Wenz
Consultant, Software Architect

@chwenz

```php
<?php

  require 'hello.php';

  echo ' World!';

?>
```

```php
<?php

  // hello.php

  echo 'Hello';

  echo ' World!';

?>
```

```php
// hello.php

echo 'Hello';
```

PHP can include external files

- include
- include_once
- require
- require_once

To include HTML files, use readfile()

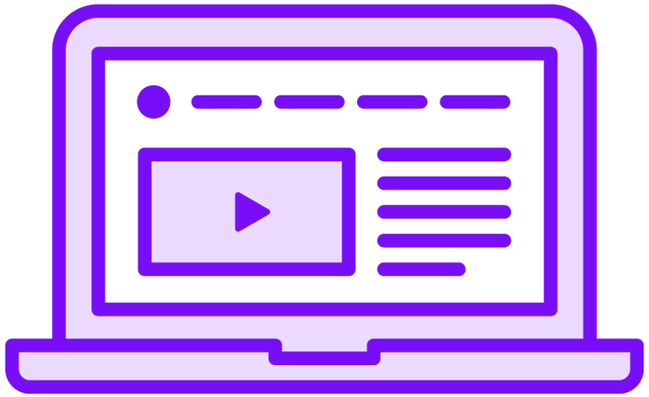
```php
// hash a password
$p = password_hash('t0ps€cr3t', PASSWORD_DEFAULT);
/* $p === '$2y$10$O4crd4crz/jMb...qn322, */

// verify a password
$ok = password_verify('t0ps€cr3t', $p);
```

Secure Password Storage

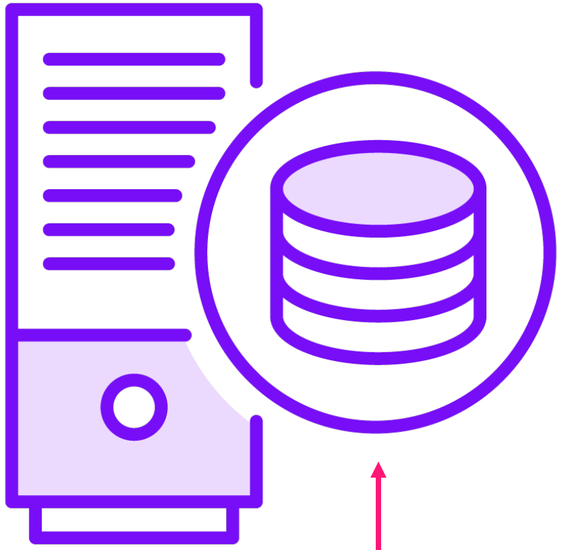
Password Hashing API

PHP Session Management



GET /page.php

Set-Cookie:
PHPSESSID=abc123



ID	Data
abc123	user=kim
...	...

```php
session_start();

$_SESSION['key'] = 'value';

echo $_SESSION['key'];
```

◀ **Starts session support**

◀ **Write to session**

◀ **Read from session**

Course Summary

PHP fundamentals

- Navigating the PHP language
- Processing form data to interact with users
- Leveraging a database to persist information
- Securely handling passwords
- Remembering things with sessions

Next steps

- Structure your applications with object-oriented programming (OOP)
- Increase quality with test-driven development (TDD)
- Make your web applications more secure
